

Risk Register

Specific Risk	Probability of occurrence	Potential Cause/Trigger	Impact	Owner	Mitigation
Wrong default gateway on a VLAN	High	Host/DHCP gateway doesn't match SVI/subinterface IP	High	Addressing owner	Verify gateway per VLAN; ping host --> gateway; fix DHCP option/router IP
Trunk mismatch blocks VLAN traffic	High	VLAN not allowed on trunk / trunk not trunking / native VLAN mismatch	High	Switching owner	show interfaces trunk; allow required VLANs; re-test VLAN-to-VLAN ping
Router-on-a-stick subinterface mis-tagged	Medium	Missing/wrong encapsulation dot1q VLAN or wrong gateway IP on subinterface	High	Routing owner	Check subinterface VLAN IDs + IPs; ensure up/up; ping between VLAN gateways
SVI/VLAN interface down on L3 switch	Medium	VLAN not created/active or SVI down; access ports not in VLAN	High	Switching owner	show ip interface brief; ensure VLAN exists + ports assigned; bring SVI up; ping across SVIs
Subnet/VLSM/mask error	High	Wrong subnet mask, overlapping subnets, typo in addressing table	High	Addressing owner	Peer-review addressing table; verify masks on devices; update table; use traceroute to locate break

Static route missing or wrong next-hop	Medium	Route not configured or points to wrong next-hop/interface	High	Routing owner	show ip route; verify next-hop reachable; correct static route; re-run ping/trace matrix
OSPF neighbor not FULL (no adjacency)	Medium	Area mismatch / auth mismatch / interface down / wrong IP	High	OSPF owner	Fix link/IP first; match area/auth; show ip ospf neighbor; capture proof output
OSPF networks not advertised (missing network statement)	High	Network statement/wildcard doesn't match interface IP	High	OSPF owner	show ip ospf interface + show ip protocols; correct wildcard/network; show ip route ospf for learned routes
OSPF enabled on user/server VLANs (accidental adjacency risk)	Medium	OSPF hellos sent on access-facing VLANs (no passive interfaces)	Medium	Security/OSPF owner	Make user/server VLANs passive; only neighbor links non-passive; verify with show ip ospf interface
No OSPF authentication (trust issue)	Low	Auth not configured; rogue router could form adjacency (real networks)	Medium	Security/OSPF owner	Configure OSPF auth; verify show ip ospf interface shows auth enabled
