Lab 1

Take screen shots that would demonstrate that you have completed each section of the lab. Use your best judgement on the specifics of what you should take screen shots of.

Screen shots should never be full screen captures, as they are typically unreadable or include large areas that are not relevant. Rather, they should be clear and easy to read. You often need to re-scale them to improve readability.

1. Redeem your Google Compute Platform (GCP) credit. See Week 1 content for directions.

This is the Google Cloud platform with my user account. This is the main console.

2. Sign up for a Student Azure account. Use this link to sign up:
<https://azure.microsoft.com/en-us/free/students>

Note: If you are asked for a credit card, you are in the wrong place

This is the home screen with my CState email at the top right corner for verification.

3. Create a Windows Server instance (Virtual Machine or VM). Do not choose a "Core" OS version (those do not have a GUI interface)

This is the completed deployment of my first Windows server instance called lab1.

4. Open the program Remote Desktop Connection (RDC) and connect to that VM

This is a window of the RDP connection to the VM with the Azure menu for the lab1 VM in the background.

5. Open Server Manager and turn off Internet Explorer Enhanced Security

Turned off the IE Enhanced Security settings for the lab 1 VM.

6. Open IE and go to www.ninite.com and select the applications you want to install. Choose anything you want, but include the following: Chrome, Firefox, WinSCP, Putty, 7-Zip, Libre Office and CutePDF. Run the installer and wait for the programs to install.

The screenshot shows the Ninite website interface. On the left, there's a sidebar with the Ninite logo and navigation links: 'Help', 'Feedback', 'Ninite Pro', and 'Sign into Pro'. Below the logo, it says 'This installer includes' followed by icons for various applications. The main content area has the heading 'Manage all your PCs with Ninite Pro' and a list of applications to install: 1. Download, 2. Run, 3. Share. A large window titled 'Ninite' is open, showing a list of applications and their status. The status for all listed applications (Firefox, Chrome, 7-Zip, PuTTY, WinSCP, CutePDF, LibreOffice) is 'OK (up to date)'. A table on the right shows a list of installed applications with columns for 'Name', 'Version', and 'Status'. The table lists Firefox, Firefox ESR 10, and Firefox 2000, all with status 'OK (up to date)'. A link 'Click here to learn more and get a trial.' is at the bottom right.

Did you know?
Here is a screenshot of the Ninite process completion.

Log out of your RDP session

7. Start RDP session again. Before connecting, click on Options, Local Resources (tab) and click More. Expand the Drive selection and click on the checkbox for the C: drive.

The screenshot shows the 'Remote Desktop Connection' dialog box. The 'Computer' field is set to 'remappserv1.cincinnati.state.edu'. The 'User name' field is empty. The 'Options' button is highlighted with a red arrow. The 'Local Resources' tab is selected, and the 'More...' button is highlighted with a red arrow. The 'Local devices and resources' section shows a list of devices and resources. The 'Local Disk (C:)' is selected with a red arrow. The 'Local Disk (C:)' is also selected in the 'Local devices and resources' section.

Now connect to your VM again. Copy a file from your local computer to the VM. Put the file in the root of c:

You can see two File Explorer windows open in the VM – one with the C: drive from my computer, and the other with the C: drive from the VM with the file ‘Cincinnati State Mock Curriculum’ on it from my personal laptop.

8. Create a snapshot of your VM.

Deployment is in progress

Deployment name : Microsoft.Compute-CaptureVM-20250115205021
 Subscription : [Azure for Students](#)
 Resource group : [Labs](#)

Start time : 1/15/2025, 8:52:23 PM
 Correlation ID : 0201438d-d18c-4ab9-98d3-26b5bf670902

Deployment details

Resource	Type	Status	Operation details
lab1-image-20250115205021	Image	Created	Operation details

The completed image of the lab1 VM.

9. Verify that the snapshot process completed (i.e. it created a successful snapshot)

Go to resource

10. Create a new VM from your snapshot

DeleteCancelRedeployDownloadRefresh

Deployment is in progress

Deployment name : CreateVm-lab1-image-20250115205021-2025011521...

Subscription : Azure for Students

Resource group : Labs

Start time : 1/15/2025, 9:04:46 PM

Correlation ID : 2b4555c3-5a9a-4595-9956-dd353da7fae2

< Deployment details

Resource	Type	Status	Operation details
lab1copy	Virtual machine	Created	Operation details
lab1copy22_z2	Microsoft.Network/networkInter	OK	Operation details

Successfully deployed an instance called lab1copy from the image of lab1.

When finished, then delete all of your VMs and snapshots

Turn in:

Attach a single MS Word document that has screen shots and descriptions (annotated) that demonstrate completion of all parts of the lab. Label each section
