

Juan Pablo de Legarreta
NETC-240
Lab 8 – 3-5-2025

1. Using the credentials emailed to you. Use a web browser in Private browsing or Incognito mode to sign into office.com using your credentials.
 - a. Show that you were able to successfully login
 - b. Show that you have MFA setup on this account**Demo before end of lab tonight**
2. Create a new folder in your College OneDrive.

Logged into my OneDrive above.

My files			
	Name	Modified	Modified By
	Apps	May 16, 2024	De Legarreta, Juan
	Attachments	May 16, 2024	De Legarreta, Juan
	Netc240Share	6 minutes ago	De Legarreta, Juan

Created a Netc240Share folder

- a. Share the folder with someone else in class (or multiple people)

Share "Netc240Share"

  Lum, Nora T 

Add more

 Sharing this folder with you per the lab assignment!

 Copy link

 Send

My files

	Name	Modified	Modified By	File size
	Apps	   May 16, 2024	De Legarreta, Juan	0 items
	Attachments			
	Netc240Share			
	Document.docx			

You've invited Lum, Nora T to view
"Netc240Share"

Successfully invited Nora Lum from class to view the Netc240Share folder.

b. Put some dummy file in the folder

My files > Netc240Share

Name	Modified	Modified By	File size
dummyfile.txt	A few seconds a...	De Legarreta, Juan	23 bytes

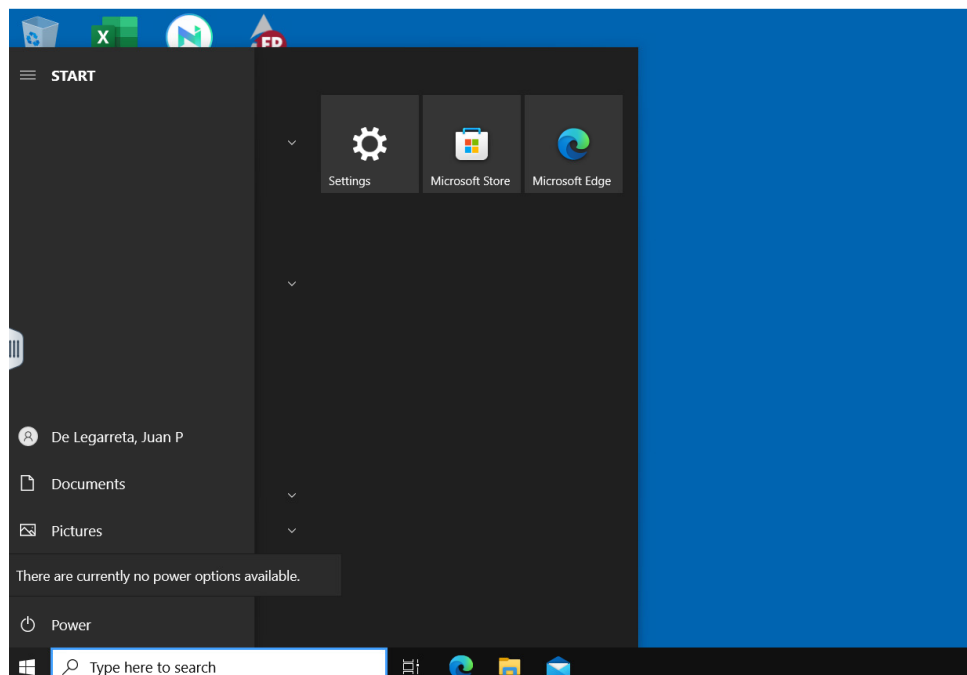

Put in a file literally called dummyfile.txt, which contains the text “This is a dummy file!”

```

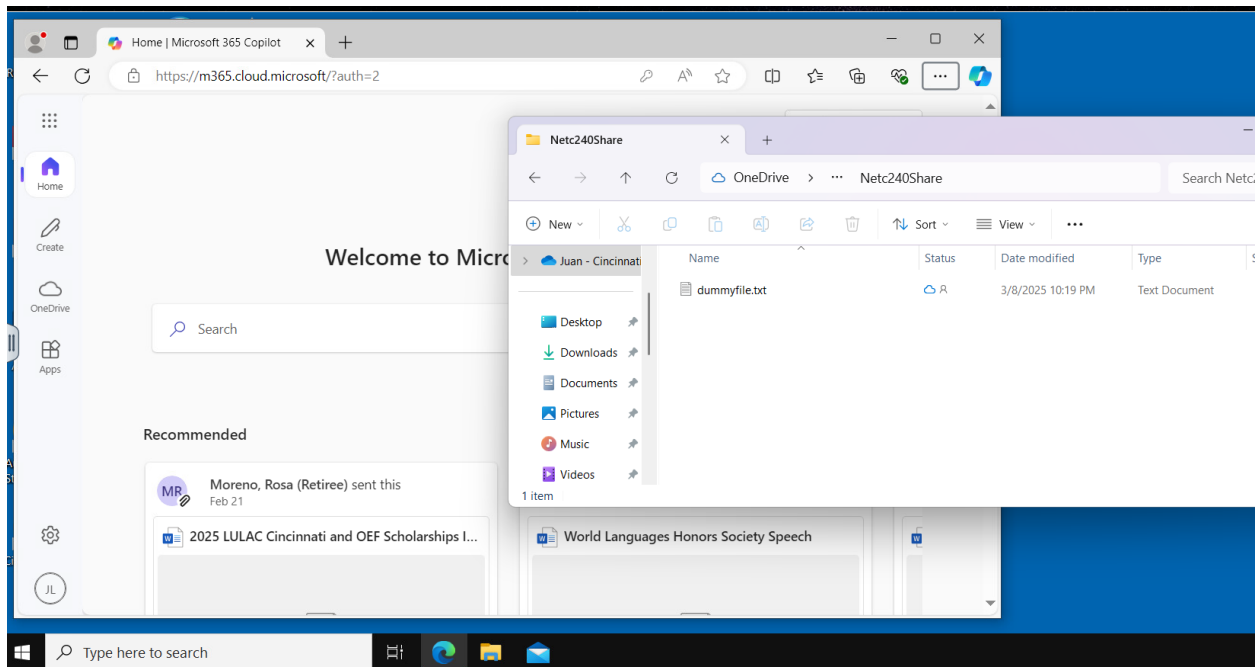

dummyfile.txt
1 This is a dummy file!
2

```

- c. Use the College VDI – mydesktop.cincinnatistate.edu Add the shared folder to File Explorer and show the contents

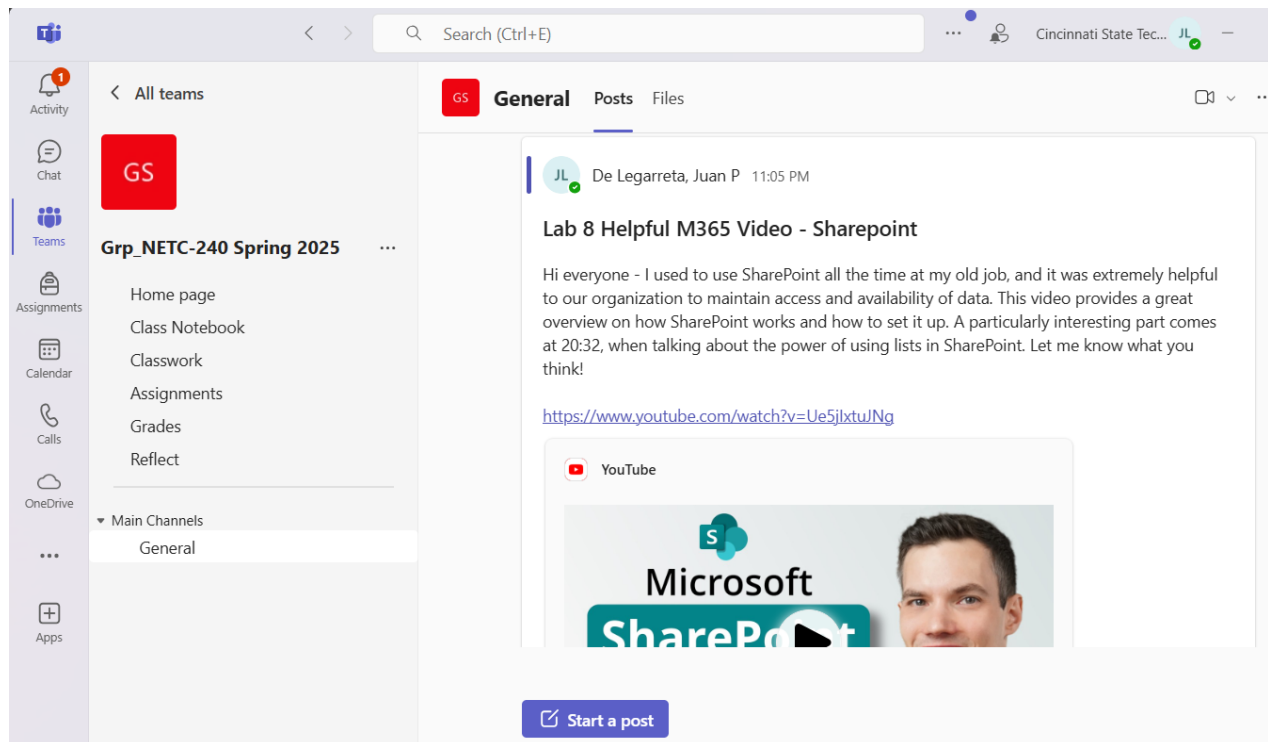

Logged into my college VDI

Added the OneDrive folder to the VDI and you can see the Netc240Share folder with the dummy file in it.

3. Post a message on the Grp_NETC-240 Spring 2025 Teams. In your message, include a link to a YouTube video that you have watched on some specific aspect of M365 administration, which you believe others would genuinely benefit. Avoid videos that provide an overview of M365 admin.

I posted a video about SharePoint in our Teams group. I found this tutorial to be very comprehensive and easy to follow. I also didn't know so many features existed in SharePoint, especially the Lists function.

4. Review the link about Microsoft Purview compliance:
 - a. <https://learn.microsoft.com/en-us/microsoft-365/compliance/microsoft-365-compliance-center?view=o365-worldwide>
 - b. Answer the following questions"
 - i. Describe the primary functions and objectives of the Microsoft Purview compliance portal. How does it integrate with Microsoft's broader suite of risk and compliance solutions?

The Microsoft Purview compliance portal's primary functions and objectives are, according to its welcome banner, to "manage compliance needs using integrated solutions to help protect sensitive info, manage data lifecycles, reduce insider risks, safeguard personal data, and more." It acts as a hub for compliance and risk management. As a hub, it has different sections that will display important information to gauge the level of risk and compliance that an organization might face.

The Microsoft Purview compliance portal integrates with Microsoft's broader suite of risk and compliance solutions through its different cards, such as the solution catalog which displays integrated solutions that are available to the organization, the active alerts that display different alerts across the Microsoft suite of risk and compliance solutions, and the other cards that are able to be added to the application, such as "Third-Party DLP policy matches" and "Retention label usage".

- ii. Analyze the role of the Compliance Manager within the Microsoft Purview compliance portal. How does it assist organizations in managing compliance and what metrics does it provide to measure progress?

The Compliance Manager assists organizations in managing compliance because it calculates a risk-based score measuring the progress toward completion of certain recommended actions that help reduce risks in data protection and regulatory standards. In other words, the compliance manager provides a score of how fully recommended actions have been implemented to reduce risks.

The compliance manager also provides pre-built assessments for common industry and regional standards and regulations, workflow capabilities to help complete risk assessments efficiently, and detailed guidance for suggested improvement actions that contain step-by-step instructions.

The metrics that the Compliance Manager provides to measure progress are controls, assessments, regulations, and improvement actions. Assessments are usually grouped around existing regulations, such as ISO 27001. Controls, regulations, and improvement actions are largely customized and related to the function of an organization. They help provide metrics to the compliance manager that helps it to track the level of compliance based on this data.
